

DHL EUROLINE DIRECT SERVICE FOR FULL AND PART LOADS

Cost efficient. Tailor-made. Ready for you.

You don't want to pay for more space and weight than you actually need. And you want full service – even for part loads. This is where we come in! DHL offers regular full-load and part-load services. Domestic and international, across Europe and beyond.

Flexibility first.

You benefit from DHL Freight's transport volumes and mix of transport equipment: long-term cooperation with selected hauliers means that we have the most economically sustainable solution, whatever the load, whatever the line of business. Our flexible services associated with haulage and transport enables you to concentrate on your core business, and to leave everything else to our freight experts.

Simplicity first.

Make use of direct pick-up and delivery with one vehicle – for full loads and part loads. This provides less handling, more security and more attractive lead times without cross-docking at our terminals.

Presence first.

With subsidiaries in over 40 countries throughout Europe, parts of the CIS (Commonwealth of Independent States), North Africa and the Middle East region, we offer a truly extensive network to deliver your products domestic and abroad.

You benefit from flexible solutions at competitive prices coupled with unbeatable service. Want to know more?

TRANSPORT SOLUTIONS – TAILORED AND MANAGED TO YOUR NEEDS.

As the leading European overland transport company, we are aware of how important it is for our customers and their businesses to have their full and part loads arrive on time. Our wide range of transportation equipment – road-trains, swap-bodies and semi-trailers – secure flexible loading conditions. According to your requirements, flows and volumes, DHL EUROLINE can optimise communication, and information flows easily through our dispatching desks and via EDI interfaces. For efficiency and reliability, our EDI interface transmits your order entries and provides reporting and statistics. We are always interested in a dialogue with you and working out ways of adding value to your supply chain.
